

NEXTILES™

TM

Nextiles is on a mission to change how the world interacts with sensor technology and enable corporations to take advantage of the massive market that is the Internet of Moving Things. We've spent years building, perfecting and patenting the ability to sew sensors into fabric which has tremendous applications across several industries. We are here to capture the data that they are missing.

HEALTHCARE

Medical professionals such as physical therapists can become more effective with their patients like never before, and with the rapid growth of Telehealth, our sensor technology enables seamless tracking and easier monitoring even outside of the clinic.

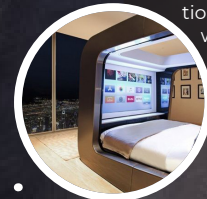

MEDICAL

For the first time, medical devices such as EKGs, body monitors, and rehabilitation equipment can be augmented with Nextiles sensing capabilities for realtime and remote tracking.

HOME

Remote work and the growing elderly population position Nextiles to leverage our fabric-based technology for in-home integration such as beds, carpets, wheelchairs, etc. for safety monitoring and remote communication.

ROBOTICS

For the growing demand of consumer grade robotic systems, interactivity is key, which means the future of robotics must have robust and cost-effective sensing abilities that can allow them to interact with the world.

NEXTILES INSIDE

Nextiles is building the future of interconnected sensing devices by leveraging sewing technology to seamlessly integrate into everyday objects.

SMART CITIES

As the Internet of Moving Things continues to explode alongside technologies like 5G, Nextiles is an enabler for an interconnected and responsive city. Examples include sensors for self-driving cars, venues, roads, and many more.

As automation increases, so does the need to track tasks often found in warehouses or logistics centers. Nextiles helps with remote monitoring and safety by protecting workers at the frontline with every movement.

ERGONOMICS

Nextiles is assisting top athletes to quantify movement with biomechanical analysis. Sports brands, athletes and teams now have the ability to measure performance in real-time thanks to our technology.

PERFORMANCE

Nextiles offers the ability to quantify with precision and accuracy, every exercise and rep with the rapidly growing digital fitness boom and enhance other offerings in the space such as gyms, spas and much more.

WELLNESS
